Dev. Genet. 21:75-81(1997).

-1- FUNCTION: Likely to represent a widespread endoprotease activity within the constitutive and regulated secretory pathway. Capable of cleavage at the RX(K/R) R consensus motif. May be responsible for the maturation of gastrointestinal peptides. May be involved in the cellular proliferation of adrenal cortex via the activation
                                                           16-OCT-2001 (Rel. 40, Last sequence update)

DOMAIN: AC 1 and AC 2 (clusters of acidic amino acids) contain boxing information. AC 1 directs TGN localization and interacts with the TGN sorting protein PACS-1.

SIMILARITY: Belongs to the peptidase S8 family.

SIMILARITY: Contains 1 homo B/P domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Proprotein convertase subtilisin/kexin

TISSUE SPECIFICITY: Highly expressed in spleen, thymus, small
intestine and peripheral blood leukocytes. Expressed in resting B-
cells and activated T-cells, but not in resting T-cells.
SIMILARITY: Contains 2 TNFR-Cys repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE=21170294; PubMed=10973284; DOI=10.1038/79802;

May serve to maintain tissue integrity by supporting extracellular matrix turnover or it may contribute to maintaining fluidity of bodily liquids by resorption of hyaluronan. Binds to both Gram-positive and Gram-negative bacteria and may play a role in defense against bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               rao Q., Zhang W., Cao X.;

SUBCELLULAR LOCATION: Type I membrane protein. Cell surface.
-1. TISSUE SPECIFICITY: Highly expressed in sinusoidal endothelial
cells of liver, spleen and lymph nodes.
-1. PTH: Proteclytically processed to yield a 190 kDa protein.
-1. SIMILARITY: Contains 17 EGF-like domains.
-1. SIMILARITY: Contains 2 laminin EGF-like domains.
-1. SIMILARITY: Contains 2 laminin EGF-like domains.
-1. SIMILARITY: Contains 1 Link domains.

TISSUE SPECIFICITY: Highly expressed in spleen and testis;
detected at lower levels in lung and thymus block at lower levels in lung and thymus block at lower block in Thirstild are a cause of severe B-cell deficiency. B-cell deficient strain A/WySnJ has a 4.7 kb insertion in the BAFFR gene leading to an altered C-terminus. The mutant RNA is not detectable. B-cell simphopolesis is normal, but the life span of peripheral B-cells is much reduced.
SIMILARITY: Contains 1 TNFR-Cys repeat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE=21614654; PubMed=11747827; DOI=10.1016/S0960-9822(01)00598-X; Harless S.M., Lentz V.M., Sah A.P., Hau B.L., Clise-Dwyer K., Halbert D.M., Hayes C.E., Cancro M.P.; "Competition for BLyS-mediated signaling through Bcmd/BR3 regulates

Curr. Biol. 11:1986-1989 (2001).

-I- FUNCTION: B-cell receptor specific for TNFSF13B/TALLI/BAFF/BLyS.

Promotes the survival of mature B-cells and the B-cell response.

-I- SUBCELLULAR LOCATION: Type III membrane protein (Probable).

-I- ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HSSP; Q96KJ3; 100E.

Vasc. Biol. 17:996-1002(1997).

Arterioscler. Thromb. Vasc. Biol. 17:996-1002(1997).

L. FUNCTION: Likely to be a multifunctional endocytic receptor, that may be implicated in the uptake of lipoproteins and of proteases. Binds LDL, the major cholesterol-carrying lipoprotein of plasma, and transports it into cells by endocytosis. Binds the receptor-sesociated protein (RAP). Could play a role in cell-cell interaction. Both estrogen status and cholesterol levels lack regulatory effects on this receptor.

C. -- SUBCELLULAR LOCATION: Type I membrane protein (Potential).

C. -- TISSUE SPECIFICITY: Expressed abundantly in brain. Present in the testes, adrenal glands and detectable in the lung.

C. -- SIMILARITY: Contains 5 BNR repeats.

C. -- SIMILARITY: Contains 1 EGF-like domains.

C. -- SIMILARITY: Contains 2 Libronectin type-III domains.

C. -- SIMILARITY: Contains 5 Libronectin class A domains.

C. -- SIMILARITY: Contains 5 Libronectin class B repeats.
                                                                                                                                                                                                                                                                                                           16-OCT-2001 (Rel. 40, Created)
